Clearly It![®] Mist
with **Origanum Vulgare**

A patented, natural alternative with drug-like effects

Every day the quest of discovery for life-changing ingredients continues at Dermazone Solutions. In order to fulfill our company mission, we must improve the quality of people's lives by sharing the advancements in care made possible, in part, with our life-science technologies. It was this quest that led us to the miraculous Origanum Vulgare – a wild mountain-grown oregano found exclusively in the Mediterranean.

In the beginning, our research and development team was interested in the efficacy this oregano offered to eliminate *P. acnes* bacteria, the bacteria that causes acne. But we could not ignore what our research showed, and so the *discovery* goes...

Our Medical Director, Chris Brown, M.D., a board certified infectious disease specialist, formerly with the NIH (National Institutes of Health), conducted a series of laboratory tests he thought appropriate to confirm or not confirm the positive findings embodied in the extensive literature concerning oil of oregano. Dr. Brown designed a series of laboratory tests to be conducted to measure the effects of oil of oregano on *Pseudomonas*, *Staphylococcus*, MRSA and *P. acnes*.

The results were more dramatic than anything we could have anticipated! The oregano-based compounds outperformed the best of traditional antibiotics and prescription anti-fungal medications, demonstrating the capacity to destroy the bacteria, fungi and virus tested against. These studies, along with the wealth of studies and articles published over many years, validated our belief...this miraculous ingredient was truly *life-changing*.

Two years in development and three years since its launch, Clearly It! Mist has proved to not only be an alternative solution for acne concerns for thousands of our customers, but we have been overwhelmed by the testimonies from those who have ventured to use this product as a remedy-like alternative for a seemingly endless variety of maladies, symptoms and conditions... Euphoric in their praise of its effectiveness with sore throats, colds, flu symptoms and all kinds of skin diseases!

I can't even believe this happened so I had to write to let you know; my throat was getting very dry and sore and I thought – I don't have time to be sick! I heard about the Clearly It Mist and thought what the heck. I sprayed it in my mouth about 3 times a day and after the second day, poof, no more sore throat! – V. Rolyn

My daughter came home from school with a very bad sore throat. Within hours, her fever rose to over 101 and would not come down even with medication. I had heard from friends about the Clearly It Mist and how it helped their kids. So I had her start spraying the Clearly It Mist in her mouth about every four hours and within two days she was completely well! I don't know what she had but nothing has cleared up a fever and sore throat like this Mist. Thank you, Dermazone. - S. Bell, Florida

The whole family uses the Clearly It Mist at the first sign of a sore throat! Both my husband and I have used the mist to stop Poison Ivy! My oldest son thanks me for introducing him to Clearly It because, as he puts it, "my face does not look like a pepperoni pizza anymore!" All four of my children thank Clearly It for their "Clear" complexions! – A. Schmitt, Indiana

Clearly It Mist is an amazing product. It is a very potent spray that kills bacteria and is great for fighting acne. Not only does it work well on fighting bacteria in our skin, but I use it to disinfect all of our toothbrushes once a week. It is safe and great for getting rid of any bacteria that's on the toothbrushes. Our Clearly It Mist is with our medicine and we could not live without it. – C. Helt, Indiana

My girlfriend told me about this new product that she discovered – Clearly It. She said that it was an antibacterial spray that cleared up her son's acne, and that he was so happy about it, he was spraying it everywhere. When a cold went through their house, he didn't get it! She realized that there was something special about this spray, so she gave me a bottle when started to come down with a cold. I started spraying it immediately, and it cleared up within a couple of days. Incredible!! – S. Hash, Wyoming

*I had heard that the Clearly It Mist completely cured ear aches from my friend but I was a bit reluctant to try it on my daughter even though she suffers from ear aches regularly. One Sunday she woke up with a horrible ear ache, and since my pediatrician was closed I decided to give the Mist a try. I dipped a q-tip in the liquid and slowly inserted it in her ear. Within minutes my daughter was saying how much better she felt. There was a warm feeling and she said it helped make the pain go away almost instantly. I treated her ear one more time that day and by Monday morning she was fine! We don't use antibiotics anymore for our daughter's ear aches. Thanks so much for a great product.
- J. Miller, Michigan*

So my dog got into a fight with another neighborhood pet. I promise we are not holding dogfights; it was a bit of a fluke. Anyway, he gets this scratch over his right eye, and it's bad, but not bad enough to pay a vet bill, so I grabbed my bottle of Clearly It and sprayed it and cleaned it as best as I could. I continued to spray it 3 to 4 times a day and it healed pretty quickly. My neighbor's dog still looked a bit bruised when I saw him, but not my Brutus. He's good to go! - L. Randolph, Texas

Every year my daughter struggles with ear infections. My brother recommended that we try spraying some Clearly It into her ear just to see if it would help. He said, "It's a bacterial infection, right, why not use an anti-bacterial spray." So we tried it...and lo and behold, it worked!!! I must say that I was pleasantly surprised! Now, my daughter keeps it in her bathroom, and sprays it at the first sign of pain. – P. Roberts, New York

More Research

These evidence-based customer experiences are confirmed by a number of independent studies, including that of the Georgetown University Medical Center (2001). Dr. Harry G. Preuss, M.D., who led that study, reported, among other things, the following:

- (1) Oregano oil at relatively low doses was found to inhibit the growth of *Staphylococcus* bacteria – which is responsible for a variety of severe infections and is becoming increasingly resistant to many antibiotics – as effectively as the standard antibiotics streptomycin, penicillin and vancomycin.
- (2) Mice infected with staph bacteria that were treated with oil of oregano achieved survival rates equal to or better than the survival rates where the antibiotic vancomycin was administered by injection.

Earlier in 2001 researchers at the Department of Food Science at the University of Tennessee reported that, among various plant oils, oil of oregano exhibited the greatest antibacterial action against common pathogenic germs such as staph, *E. coli* and *Listeria* [*Journal of Food Protection*, Volume 64, July 2001]. Somewhat earlier British researchers reported oregano oil had antibacterial activity against 25 different bacteria [*Journal of Applied Microbiology*, Volume 88, February 2000]. A clinical study in Italy has shown that oil of oregano can be used to treat intestinal parasites [*Phytotherapy Research*, Volume 14, May 2000].

The body of positive evidence for oregano oil as a major antibiotic is growing. Among 52 plant oils tested, oregano was considered to have “pharmacologic” action against common bugs such as *Candida albicans* (yeast), *E. coli*, *Salmonella enterica* and *Pseudomonas aeruginosa* [*Journal of Applied Microbiology*, Volume 86, June 1999]. *Pseudomonas* is a type of germ that is getting more difficult to treat as it has developed strains that are resistant to antibiotic drugs.

The growing problem of *antibiotic resistance* has health authorities concerned. Already various germs are showing resistance to vancomycin, particularly to intestinal bacteria among hospitalized patients [*Southern Medical Journal*, Volume 94, August 2001]. Vancomycin is considered to be one of the most potent antibiotics available and has been withheld from use as a drug of last resort.

More Evidence

The Georgetown University studies, along with those cited above, confirm the observations of Dr. Cass Ingram as presented in his book *The Cure is in the Cupboard*. In his 187-page treatise, Dr. Ingram, considered the leading authority on the production and uses of oil of oregano, reports the following:

- (1) “Oil of oregano is one of those rare substances that can alter the course of history. It possesses dependable anti-infective powers; in other words, if a

contagious infection develops, oil of wild oregano is one of the few substances known that will produce consistent positive results.”

- (2) “New studies have been performed on wild oregano oil demonstrating powerful antiviral actions. The oil was tested against aggressive germs, including the cold, flu and even bird flu viruses. In all cases the wild oregano oil destroyed the viruses. In tissue culture the wild oregano oil virtually completely destroyed the human coronavirus, a 99.9% kill, in a mere 20 minutes. The coronavirus is the microbe responsible for nearly 50% of the infections diagnosed as the common cold or pneumonia and is solely responsible for SARS (Severe Acute Respiratory Syndrome). The destruction of the influenza A and bird flu viruses was nearly as complete; a 99% kill. This is an impressive result, which has never been achieved by any drug.”

These extensive studies and Cass Ingram’s observations fully validate and confirm the *experiences* of our employees, customers and friends who have used Clearly It! Mist.

“We have been able to take what God made perfect, *origanum vulgare*, biblically known as *hyssop* (used by Moses to prevent and combat various diseases which afflicted the children of Israel), and make it work even smarter with our life science delivery technology know as Lyphazome.”

“We feel compelled to share and connect as many people as possible with this *Promise of Performance* for the season upon us. It is a simple matter of mothers connecting mothers for the good of our children,” says Deborah Duffey, President and mother.

But the Discovery with Clearly It! Mist Continues to Grow

Read what nationally recognized and respected veterinarian Dr. John McCarroll has to share as he began to experiment with Clearly It! Mist on performance horses just this year...

“Using the Clearly It! Mist, sometimes diluted for applications in the uteri of brood mares or on the eyes, but mostly full strength as contained in our bottles, I have experienced outstanding results. Stubborn infections of the uterus, which could not be effectively treated by the best prescribed antibiotics, often after months of treatment, were cleared up in a matter of a few days. Wounds of all kinds have improved in about half the usual time, using the best standard pharmaceutical medications. In one large training barn an extremely stubborn saddle fungus that had persisted for a *couple of years* was obliterated with this formula.”

We Share...You Decide

We believe we are living in a time when conventional drugs are becoming less and less effective against infectious diseases, with bacteria mutating and becoming resistant and often immune to the very best of the conventional drugs, regardless of cost. Moreover, as

the headlines remind us almost every day, dangerous viruses of all kinds seem to proliferate and come at us in waves as the flu season arrives, lingers and finally goes. The media pounds out the dire warnings of Asian flu, bird flu, swine flu, SARS, influenza A, etc., etc., all of which severely threaten our health, and the health of our children and families. And yet, notably absent from all the dialogue of each potential crisis is any mention of a drug which will prevent or cure the disease resulting from the guilty virus.

Existing drug regimens are mostly ineffective against all of these viruses, and the federal government is exerting frantic efforts to spur the pharmaceutical industry to come up with a vaccine or vaccines which will work before a major pandemic overwhelms the country.

Often the sore throats and colds which are the precursors of the dangerous influenzas we are being warned about are beyond the reach of known conventional medications.

The Beauty Product That Can Help YOU Stay Healthy!

Most of you have known our company for a number of years, and have dealt with us as customers. You have ordered, used and reordered our products over and over again. You know our reputation based on your experience with us, and that is: we are THE provider of patented skincare made at pharmaceutical standards – guaranteed to work in two weeks!

Today we simply want to share with you **your** discovery and **our** collected research of this miraculous formula Clearly It! Mist, and the ways in which this beauty product can help your family stay healthy for this season and the future.
